

New Glasses

Our conference this year is a *Hyper Concept* for the future. We will focus on creating **NEW GLASSES** to reshape our time from **Conventional Thinking** to another mind set, instead of letting time and global forces shape our educational values.

Today there is a new game, a **Neo Architect** as a player in this game, a **New Black Box game** with futuristic hidden dimensions.

Tomorrow there will be a **New Pilot Thinking game** with new glasses to penetrate our reality and our gravity. These glasses will change our era to a **New Representation**, towards a **Second Life**.

Our **New Glasses** are **the Presentation and Representation**, from **the Shape of Time**, to **reshape our time**, from **conventional tools to a New Media Display**. It is a new reason for our architectural needs, to call for an **“Out of the Box” New Vision**.

Our conference will not be looking for the spirit of the age, but for bridging to the **New Scenes** of the day.

The real aim this year is to display our **New Glasses, New Images and New Mind for a New Reality**. You can control the world with the **Speed of Thinking**, to view change and to foresee the **New Energies of the universe**.

How to wear New Glasses to reread the world? How to change your eyes? (**Architectural Glasses, Urban Glasses, Ecological Glasses, Identity & Cultural Glasses and Technical Glasses**)

With the New Glasses you can extend your age, experience and buy **New Time** at high speed. You can think of **Adaptation and Re-adaptation of the Meaning with a pre-dynamic mind towards a New Reality**.

If you are interested in an *Eye Opening Experience*, this is an opportunity to cooperate and participate by presenting a paper on one of the following topics:

Architectural Glasses

What is the new studio design towards a new pilot thinking in design and application to exceed the conceptual timing in design towards a new reality?

New Glasses Theory

What is the new language for architecture in the next era?

What is the new thinking theory & mind for architectural re-presentation?

Urban Glasses

A new Aphoristic mind.

From land use to urban mass to location to accept different scenarios.

Glasses and Planning Vision

How to think embryonically to inject new magnets with futuristic responsibility

- New planning strategy to readapt our needs and reasons
- Fractal planning and refractaling glasses

Contemporary Technology Glasses

- How technology will fill the gap of the disability of the human being.
- How technology reshapes the form generation in space.
- New philosophy of technology

Environmental Glasses

- Ecological vision, alternative kinetic glasses and re-adaptation
- Shape of time with green architecture
- New codes for the scientific LEED and how it will affect the design process.

Glasses and IT

- How to pre-stress the meaning of form and the demassification of function to restructure new geometry with new media.
- New marriage between the physical aspects and the virtual one towards a new hypertextual studio and a Mediator Architect.
